

PUBLIC NOTICE

SITE-SPECIFIC STANDARDS UPDATE

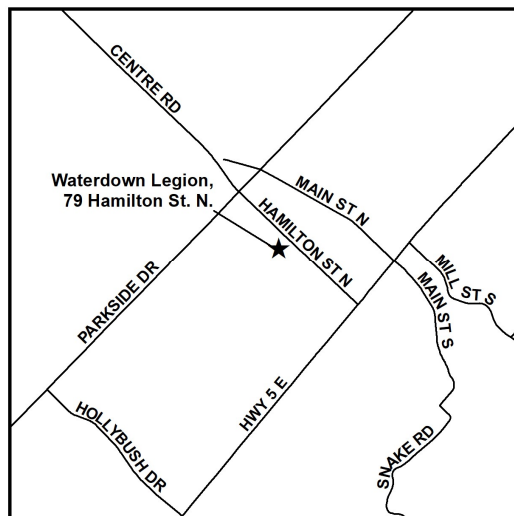

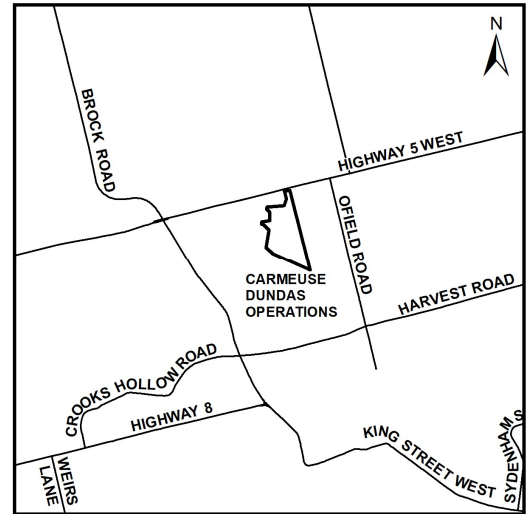

Carmeuse Lime (Canada) Limited Dundas Operations

Carmeuse operates an existing lime manufacturing facility located at 600 Highway #5 West between Brock Road and Ofield Road South near Greensville.

Lime is produced by heating limestone. Lime is used in many applications including steel manufacturing, construction, environmental remediation, water treatment, mining, and production of many consumer goods.

In 2016, Carmeuse conducted public consultation and applied for two Site-Specific Standards under Section 32 of *Ontario Regulation 419/05 Air Pollution – Local Air Quality*. In 2018, after completing a technical review, the Ministry of the Environment, Conservation and Parks issued Site-Specific Standards for Calcium Oxide (lime) and Suspended Particulate Matter (dust).

An Action Plan to reduce airborne emissions of Calcium Oxide and Suspended Particulate Matter was developed as part of the Site-Specific Standard process. Carmeuse has completed implementation of the Action Plan and will review achievements during an in-person public meeting.

Public Meeting

Tuesday, November 14, 2023 from 5 pm to 8 pm
at the Waterdown Legion Branch 551
79 Hamilton Street North, Waterdown, Ontario
(Second Floor)

Representatives from Carmeuse and Stantec will share information and answer questions about the Action Plan during the public meeting. Additional information is available on Carmeuse's website.
